Hi everybody, greetings from Mauritius: Mahen Busgopaul

08:14:02 From Anthony Harvey to Everyone:

Less Developed Countries and their communities could get \*Industrialization from the Grassroots,\* once they embrace the use of their ceramic resources. The natural resources tend to be abundant, ie., rocks and minerals. Skilled potters are ubiquitous. Please have a look at this presentation of October 4, 2022, to the EU Tech Chamber Manufacturing Alliance. Nearly all of the SDGs are addressed squarely.

08:15:27 From Anthony Harvey to Everyone:

Jan-Gustav and others, so many are aware that TRICKLE DOWN does not work. It's allure, however, seems to be irresistible.

08:17:44 From Ebrima Jarra to Everyone:

Food insecurity is one of the most accelerating threat to life's today.

08:18:01 From Anthony Harvey to Everyone:

All over the developing world people ask, "Why do we not develop?. We have the resources and yet we do not develop!" Please! What is primarily needed is training and education, not trickle down!

08:18:57 From Sarah Breslin to Everyone:

Can you please send the link to the report that Jan-Gustav mentioned 'Valuing What Counts'?

08:19:28 From Jonathan METRE to Everyone:

Good afternoon and Good day to you all and this is Adugna Haile from Ethiopia.

08:20:49 From Masango Sone to Everyone:

Colonial Pacts like those signed between Francs and francophone African Countries are keeping Africa permanently in poverty. Even Policy can not be discussed, Education and others can

not be revised without the permission of Francs. I think The world has to start by abolishing all such devilish pacts

This insulating rocket stove in Rwanda, burns solid fuel cleanly, i.e., biomass. Contrary to mistaken notion, the right solids fuels and means of burning them can be clean!! This 2-piece insulating rocket stove uniquely, is 2-piece, for cook pots of any size. The stove is affordable at Rwanda Francs- RF 4,000, i.e., US\$4. The stove prevents respiratory illnesses! It prevents the need to cut down trees for wood fuel or charcoal! Gifts of stoves are wonderful but the vulnerable need to be trained in production! Who will give them a new stove in 5 or 10 years when they need one?

08:54:47 From Anthony Harvey to Everyone:

It is a terrible mistake to tell people that solid fuels cannot be burned cleanly! If you ask ceramic educators they will tell you that biomass fuels will burn cleanly, given well designed stoves, kilns or furnaces. To tell people unequivocally that solid fuels cannot be burned cleanly serves to prevent the development of micro-industry from the grassroots! This is wrong-headed and unjust! The policy brings about continued dependency by those who are in need of livelihoods and development.

08:57:53 From Charles Nouhan to Everyone:

09:01:52 From Anthony Harvey to Everyone:

Granulated ceramic water filter systems will leave no one behind for safe drinking water. The systems function on gravity with no other need of energy. The filter systems can be large-scale, point-of-use, a short walk from homes. Have a look at a schematic of water filter systems of granulated ceramic media.

Thanks for the geographic list ;-)

09:14:46 From Anthony Harvey to Everyone:

In addressing SDG8 and the other SDGs, the most effective capital-intensive programs will be those that are resource intensive. All over the developing world people ask, "why do we not develop? We have the resources and yet we do not develop!" In fact, the human and natural resources necessary to industrial development are nearly everywhere. What is primarily needed, and has been seriously lacking, is training and education. Then, innumerable kinds of industry will come about, with far less need of imports.

09:17:31 From Meredith Beal to Hosts and panelists:

We won't make the SGD Goals by 2030 unless we broaden the level of engagement in society. Back in 2020 I brought to the attention of UN Environment that, unless CHILDREN are involved in the campaign we are not going to get there. Until children and teenagers are actively engaged in efforts to mitigate climate change and embracing behavior necessary to attain the SDGs, it's not going to happen. The youngest demographic that I have seen engaged by the UN is at the university level. If primary and secondary school pupils are not involved on a mass level, if it's NOT in their curriculum, sustained change won't happen. They need to be engaged in order to change the culture on the planet.

09:19:37 From Thaynara Leal to Everyone:

Thanks for the list Maria Cristina, It could be noticed that most of the countries present here (people) are from developing regions where there a biggest lack of access to inclusive, clean and fair energy.

09:20:42 From Gabriela Liendo to Everyone:

Good morning, it's a pleasure to participate in this virtual event and listen to the experts. I am from Bolivia, we have and enormous opportunity to develop renewable energy. I work in the private sector and the challenge is to make the industry join to the urgent implementation of SDG.

09:22:47 From Thaynara Leal to Everyone:

Countries that have a faulty and outdated energy connection and flow structure, and mainly that deserve due care and encouragement (and financing) from developed countries to overcome this challenge.

09:22:54 From Charles Nouhan to Everyone:

Hello. We are running a bit over, so would like to keep going until 45 minutes past the hour so as to answer questions. So please stay with us if you can. Thank you.

09:30:41 From Amparo Elisa Rojas Ramirez to Everyone:

thank you for this Wonderful session. !

09:32:35 From Thaynara Leal to Everyone:

And to finalize my contribution, I believe that if there is no energy justice in these still developing countries, we will not reach a fair decarbonization goal. Many polluting countries have the best technologies to generate clean energy, but those that pollute the least remain at the mercy of the exploitation of their resources and the lack of investment to change their realities. Climate finance is key for these challenge. 09:35:04 From Anthony Harvey to Everyone:

Extreme poverty can be alleviated, starting with the training of potters and their neighbors. The potters are ubiquitous, producing, e.g., water containers and cook pots. These are affordable to their neighbors while plastic buckets and metal cook pots are not so affordable. Once trained in production of duplicates, the potters can do production of energy optimized cook stoves and ceramic water filters. These products will then be affordable within their communities. The new skills will make possible innumerable products and make low-income communities self-sufficient.

it was really enriching. Hoping to have great sessions as such. Goodbye from Cameroon

09:43:24 From Anthony Harvey to Everyone:

Sustainable development professionals and ceramic educators have been like ships that pass in the night, unaware of each other. The LDCs and their communities will be industrialized, once the use of their abundant ceramic resources are embraced.

09:50:37 From Anthony Harvey to Everyone:

Artificial intelligence is great but for example, the emphasis on computer aided design overlooks the essential opportunities of traditional model and mold making. Those who have never had formal education need training in model and mold making.

09:51:46 From David O'Connor, IUCN & SF Fellow to Anthony Harvey and all panelists:

Thanks, Anthony, for your thoughtful comments.
